

Embedding a SWF Movie in Acrobat

This is a demonstration of the communication potential associated with embedding a SWF file (Flash) in an Adobe Acrobat file. The possibilities of this technology mean that operations manuals or instruction books can incorporate text created in MS Word like this document along diagrams such as the one below from MS Visio and of course the SWF file itself that in this case was created with Camtasia Studio 5. **To gain a larger perspective on this document, don't forget to use the zoom tool in Acrobat Reader.**

MS Visio Drawing

SWF (Flash) Movie

(Made with Camtasia Studio)

To view the video, click the film reel and then the play button that is revealed. Use the Zoom tool in Acrobat to make the movie as large as you want.

To quit the movie, press "esc" on your keyboard.
